DESCRIPTORS Behavior Theories; *Bibliographies; Biological Influences
IDENTIFIERS *Biorhythm Theory

ABSTRACT

One hundred and thirteen sources of information published between 1904 and 1976, including a thorough coverage of scientific papers and representative journal and newspaper articles, are listed in this bibliography on the bio-rhythm theory. Developed in the early 1900's, this theory postulates that all humans experience regularly recurring physical, emotional, and intelligence cycles which influence the course of their lives. (KP)

ABSTRACT

Taylor, Thomas C.

Bibliography of Publications Related to the Bio-Rhythm Theory

The theory of bio-rhythms was developed in the early 1900s by Wilhelm Fliess, Hermann Swoboda, and Alfred Teltscher, and centered on the idea that all humans experience certain recurring cycles which influence their entire lives. These cycles include a twenty-three day physical cycle, a twenty-eight day emotional cycle, and a thirty-three day intelligence cycle.

This bibliography lists 113 sources of information on the subject. It is constructed so as to be thorough in its listing of scientific papers which deal directly with the theory while allowing for representative articles from the popular media. The list was gathered through 1976.
